

SITE MASTER**S100/S200A/S300A series**

5 to 3300 MHz

Site Master is the instrument of choice for transmission line/antenna installation and maintenance. It is the best way to reduce maintenance expenses and improve quality. It replaces stacks of heavy, expensive and complex test equipment. Site Master's frequency domain reflectometry technique allows it to find problems before they become catastrophic faults, thereby creating a huge cost savings.

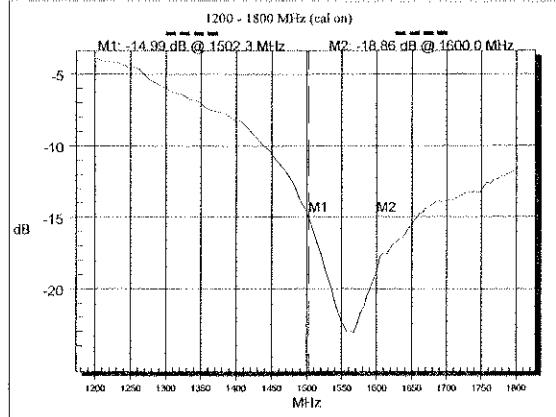

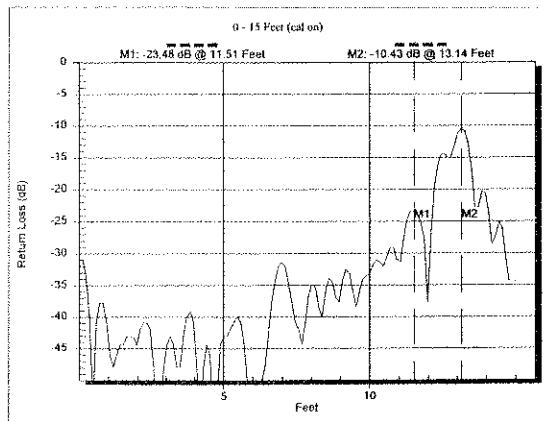

The Site Master is a precision, hand-held return loss/SWR and fault location measurement instrument. Site Master series offers a wide frequency coverage with products covering 5 to 3300 MHz. Built-in fault location and wattmeter capabilities are available. Light weight, rugged design and wide temperature range make it ideal for field applications. Site Master's proprietary design provides immunity to RF interference, which is important for live site testing.

Site Master Software Tools is a Windows® compatible software program provided with every Site Master unit. This software program provides many useful features including a database for Site Master measurements, Smith Chart display of S₁₁, "drag-n-drop" overlay for measurement comparison, capability to download data to a PC and distance-to-fault calculation from return loss or SWR plots. Advanced printing capabilities are provided by Site Master software tools including user definable plot scaling and a multiple plots per page option.

Site Master is the first test tool to provide the required accuracy, interference immunity and repeatability for transmission line/antenna commissioning and maintenance of today's wireless systems infrastructures.

Features

- Accurate return loss/SWR measurements
- Built-in distance-to-fault, S113, S331A, S120A, S235A and S250A only
- Accurately tests RF transmission lines and antennas
- Immunity to live site RF interference
- Distance-to-fault windowing functions
- Insertion Loss/Gain
- Optional wattmeter
- Synthesizer accurate to 75 ppm
- Internal memory saves up to 50 traces
- Direct printing via RS-232 serial port
- Remote operation via RS-232 serial port

Site Master allows implementation of preventative maintenance procedures. Unlike TDRs and spectrum analyzers/tracking generators, Site Master can spot RF degradation before failures occur. Problems can be fixed before expensive cables are ruined.

Site Master is designed for field requirements. Its rugged construction survives rough field treatment. Battery power, light weight, small size, wide temperature range and simple user interface are exactly what field technicians want today. Technicians can test antennas from ground level because Site Master's distance-to-fault measurement compensates for cable insertion loss. Site Master offers a new and better method to install and maintain cables and antennas.

Wattmeter (RF power monitor, Option 5)	Range: 0 to 20 dB, Resolution: 0.01 dB		
Cable loss	Precision N female		
Test port connector	N(f) test port: +22 dBm		
Maximum input without damage	RF power detector: +20 dBm, 50 Ω		
General	Electromagnetic compatibility: Meets European community requirements for CE marking. Temperature: 0° to 50°C (operating), -20° to 75°C (storage) Weight: 2.2 lbs. Mass: 8 x 7 x 2.25 inches		

^{*1}: All specifications apply when calibrated at ambient temperature after a five minute warm up.^{*2}: Immunity performance is represented for a typical worst-case condition. Measurements were made in CW mode by injecting a signal into the Site Master through a coupler with the same signal injected through the coupled arm. In field applications, signals are modulated and varying in frequency rather than CW. Immunity is typically better when swept frequencies are used.^{*3}: Where Up is the cable's relative propagation velocity. Wide frequency sweeps improve resolution but reduce maximum display range.
