

## DCS: 1 kW, 1.2 kW and 3 kW DC Programmable Switching Supplies

The DCS Family of 1 kW, 1.2 kW and 3 kW programmable power supplies utilize switch-mode technology to achieve high power density in a low profile chassis. Utilizing unique packaging techniques, the DCS Family provides continuous full output power (1 kW, 1.2 kW or 3 kW) in any volt/amp combination within the rated output voltage and current limits.

This family has 10-turn potentiometers to adjust voltage and current settings that are displayed simultaneously. LEDs indicate overtemperature, remote programming, shutdown and overvoltage protection, status and constant-voltage/current mode operation.

The DCS 3 kW Models have push button control of the output standby mode, OVP reset, remote/local programming and preview status of voltage, current and OVP setpoints.

Options include an internal IEEE-488/RS 232 interface (Option M9C), isolated analog programming of voltage and current (Option M51A), and the multichannel slave interface (Option M85).
