### 3-18 kVA Programmable AC Power Source / Analyzer

- Backward Compatible with L Series Function and bus compatible with the California Instruments L Series
- Three phase and Single phase modes Ideally suited for avionics and defense applications
- 3 kVA to 18 kVA Power Levels Match power source and cost to application requirements
- Transient Programming Test products for susceptibility to AC line disturbances
- Built-in Measurements Performs voltage, current, and power measurements
- Advanced Features Arbitrary waveform generation, harmonic analysis, GPIB interface are some of the available options
- Interface Standard USB & RS232C interface. Optional GPIB & LAN available
- CE Marked (400V Input model ONLY) Safe, reliable, and consistent operation

### Integrated System

The Ls Series is an improved version of the classic California Instruments L Series AC power sources. The Ls Series provides many basic AC source capabilities at an economical cost. Additional capabilities such as arbitrary waveform generation and harmonic analysis can be added as options.

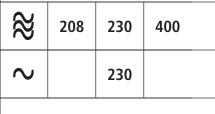

The Ls Series can be ordered in either single phase (-1) or three phase (-3) configurations. Power levels range from 3 kVA to 6 kVA in a single chassis. Multiple chassis can be combined for power levels up to 18 kVA.

### Easy-To-Use Controls

The Ls Series is completely microprocessor controlled and can be operated from simple front panel controls. A pair of analog controls located next to the backlit alphanumeric LCD display allows output voltage and frequency to be slewed up or down dynamically. For more advanced operations, a series of menus is provided using a dual line high contrast LCD display. An optional full keypad is available.

# 135–400 V 0–132 A

ETHERNET COSE GPIE RS232

### Applications

With precise output regulation and accuracy, high load drive current, multi or single phase mode and built-in measurement capabilities, Ls Series AC sources address many application areas of AC power testing. Additional features such as DO 160, MIL 704, Boeing, or Airbus test standards are available options that establishes the Ls Series as a solid choice for avionics or defense applications. All Ls Series AC sources are standard equipped with USB and RS232C remote control interfaces. GPIB and Ethernet (LAN) interfaces are optional.

### Compatibility

Although the standard command language is SCPI, the Ls Series also offers functional and bus compatibility with the CI L Series AC power sources. Using the APE (Abbreviated Plain English) command syntax, the Ls Series can be used in existing test systems without having to modify program code. The APE language is part of the -GPIB option which includes a GPIB/ IEEE-488 interface.

### AMETEK Programmable Power 9250 Brown Deer Road San Diego, CA 92121-2267 USA

### **Transient Programming**

To simulate common line disturbance occurrences, the Ls Series offers a list of transient steps. These steps can be programmed from the front panel or downloaded over the interface using the Interface Instrument Control Software (GUI) program supplied. The GUI allows libraries of commonly used line disturbances to be created on disk for guick recall. Once downloaded, the transient program can be executed from the PC or from the front panel. AC transient generation allows the effect of rapid changes in voltage, frequency, phase angle and waveform shape on the unit under test to be analyzed. The Ls Series is available in either three or one phase output configurations and offers standard voltage ranges of 135 Vrms and 270 Vrms. A wide range of options can be added to customize the Ls Series to meet your specific application requirements.

### Voltage Range Options

Output voltage range options are available to provide higher voltage outputs. In addition to the standard 135/270 V range pair, 156/312 Vrms (-HV option) or 200/400 Vrms (-EHV option) can be specified at the time of order. All voltage ranges are Line to Neutral. On three phase Ls Series models, maximum Line to Line voltages are 467 V (standard), 540 V (-HV option) and 692 V (-EHV option).

### Phase Mode

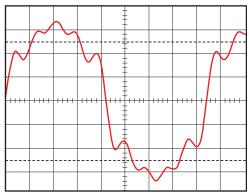

The -MODE option provides automatic switching between three phase and single phase output modes. In single phase mode, all output current is routed to the Phase A output terminal. The -MODE option is available for 3 phase Ls configurations.

### Waveform Generation

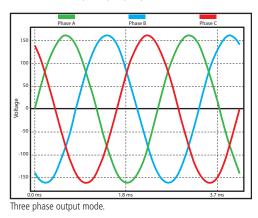

The standard Ls Series provides sine wave output capability. For more demanding test applications, the advanced option package (-ADV) adds the following waveform capabilities:

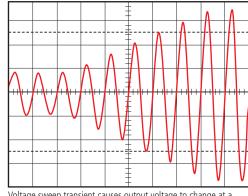

- Squarewave.
- Clipped Sinewave Simulates THD levels to test for harmonic distortion susceptibility.
- Harmonic and Arbitrary (User defined) waveforms.

Using the provided Windows GUI, defining harmonic waveforms is as easy as specifying the relative amplitude and phase angle for each of up to the 50th harmonic. The waveform data points are generated and downloaded by the ICS to the AC source through the standard RS232C, USB or optional LAN or GPIB bus and are retained in non-volatile memory. Up to 50 waveforms can be stored and named for easy recall.

Harmonic waveform, Fund., 3rd, 5th, 7th and 9th.

Voltage sweep transient causes output voltage to change at a programmed rate.

### Ls Series - Measurement and Analysis

The Ls Series measurement system is based on real-time digitization of the voltage and current waveforms using a 4K sample buffer. The digitized waveform data is processed by a Digital Signal Processor to extract conventional load values such as rms voltage, rms current, real and apparent power. With the addition of the advanced features option. (-ADV option), the same data can also be used to perform Fast Fourrier Transformation (FFT) to extract the harmonic amplitude and phase angle of 50 harmonics, or display acquired voltage and current waveforms.

### Standard Measurements

The following standard measurements are available from the front panel or via the bus:

- Frequency and Phase
- Voltage (rms)
- Current(rms) and Peak Current
- Crest Factor
- Real Power and Apparent Power
- Power Factor

### Advanced Measurement Functions (-ADV option)

Power analysis of EUT load characteristics is available by adding the -ADV option. Harmonics up to the 50th harmonic (for fundamental frequencies up to 250 Hz) and total harmonic distortion of both voltage and current is provided as well.

Harmonic analysis data can be displayed on the front panel display or on the PC using the GUI program. The GUI can also be used to save and print harmonics data in tabular, bar graph or time domain formats.

The acquired voltage and current time-domain waveforms for each output phase can be displayed using the GUI program. Waveform displays on the PC. Available display modes include voltage and current combined, three phase voltage, three phase current and true power. The time-domain data is also available for transfer to a PC through the bus when using custom software.

### **Diagnostics** Capability

The AC Source can perform a self test and report any errors. The self test will run until the first error is encountered and terminate. The response to the self test query command will either be the first error encountered or 0 if no error was found. (Self test passed).

### Windows Graphical User Interface

A Windows compatible Instrument Control Software (GUI) offers a soft front panel interface for operation from a PC. The following functions are available through this GUI program:

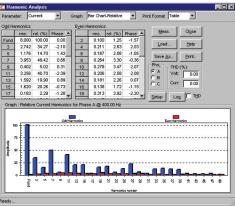

- Steady state output control (all parameters).
- Create, run, save and print transient programs.
- Measure and log standard measurements.

### With -ADV option:

- Generate and save harmonic waveforms.
- Generate and save arbitrary waveforms.
- Capture and display Voltage and Current waveforms.
- Measure, display, print and log harmonic voltage and current measurements.

Note: Specifications are subject to change without notice. Specifications are warranted over an ambient temperature range of 25°± 5° C. Unless otherwise noted, specifications are per phase for a sinewave with a resistive load and apply after a 30 minute warm-up period. For three phase configurations, all specifications are for L-N. Phase angle specifications are valid under balanced load conditions only.

9000Ls/2-400	9 kVA	1	3	400 V	
12000Ls/2	12 kVA	1	3	208-230 V	
13500Ls/3	13.5 kVA	1	3	208-230 V	
13500Ls/3-400	13.5 kVA	1	3	400 V	
18000Ls/3	18 kVA	1	3	208-230 V	

Note 1: The /2 or /3 designation indicates number of chassis.

Note 2: All input voltage specifications are for Line to Line three phase, delta or wye. Model 3000Ls (208 V input) can be operated on 230 V L-N single phase if needed.

HF Table Model	Max. Freq.
3000Ls	5000 Hz
4500Ls	5000 Hz
6000Ls	5000 Hz
9000Ls/2	2000 Hz
12000Ls/2	2000 Hz
13500Ls/3	2000 Hz
18000Ls/3	2000 Hz

#### Ordering Information Model

Refer to table shown for model numbers and configurations. Specify number of output phases (-1 or -3) as part of model number, eg 4500Ls-1 or 4500Ls-3.

### Supplied with

User / Programming Manual on CD-ROM,
Software and RS232C serial cable.

### Options

Input	Option
-------	--------

- -400 400 ±10% Volt Line to Line AC input Includes CE Mark. [Not available on 6000Ls, 12000Ls and 18000Ls Models]
- -480 480 ±10% (3 phase output only)

### **Output Options**

- -AX Auxiliary outputs, 26 VAC, 5 VAC. Limits upper frequency to 800 Hz.
- -HV 156/312 V output range.
- -EHV 200/400 V output range.
- -HF Extends upper frequency limit. See HF table.
- -LF Limits output frequency to 500 Hz.
- -FC Modifies output frequency control to ±0.25%

### **Keypad Options**

-KP Upgraded keypad control panel.

### **Cabinet Options**

-RMS	Rackmount Slides. Recommended for
	rack mount applications.

C prefix Cabinet System. Installed and pre-wired in 19" cabinet.

### **Controller Options**

-ABL Emulates Elgar SL Series

-ADV Advanced feature set. Adds arbitrary waveform generation and harmonic analysis of voltage and current.

-GPIB	GPIB interface and APE programming language.
-LAN	Ethernet Interface.

- -MB Multi-box. Adds controller to auxiliary chassis of multi-chassis systems.
- -MODE Add phase mode selection for 3 models
- -L22 Locking Knobs.
- -LKM Clock and Lock Master
- -LKS Clock and Lock Auxiliary
- -LNS Line Sync.
- -EXS External Sync.

-/

-4

### Avionics Test Routine Options

ABD	Airbus Directive 0100.1.8 tests. [AC only]. Requires -ADV and use of Windows PC and included LxGui software.
AMD	Airbus AMD24 Test
A350	Airbus Test Software

- -AIRB Airbus A380, A350 & AMD24 package
- -704 Mil-Std 704 rev D and E test firmware. [AC only]
- -704F Mil-Std 704 rev A F
- -160 RTCA/DO-160, Change 2, EuroCAE-14D [Section 16, AC only]

\* Note Reference the Avionics Test User Manual P/N 4994-971 for a complete listing of performance capabilities.

### **Option Matrix**

	HF	LF	нν	EHV	LKM	LKS	EXS	AX
HF	-	х	0	0	х	х	0	х
LF	х	-	0	0	0	0	0	0
нν	0	0	-	х	0	0	0	0
EHV	0	0	х	-	0	0	0	0
lkm	х	0	0	0	-	х	0	0
LKS	х	0	0	0	х	-	х	0
EXS	0	0	0	0	0	х	-	0
AX	х	0	0	0	0	0	0	-

Note 1: See option matrix

Note2 : -LKS, -LNS and -EXS are mutually exclusive and with Ext Trig function.
